

Project Progress Report: Submission Instructions

Course: Computer Graphics — Spring 2026

Purpose

The progress report is a checkpoint between your proposal and the final submission. It allows you to demonstrate that meaningful work has been completed, identify issues early, and adjust your scope if necessary. You will prepare and upload a short document following the guidelines below.

What Your Progress Report Must Include

Create a single PDF file (max 3 pages) with the following sections:

- **Project Title & Your Name:** Self-explanatory. Also include your chosen project direction (Scene Rendering System, Mini Game, Simulation, Rendering Showcase, or Experimental Graphics).
- **Summary of Progress:** 4–6 sentences. Briefly describe what you have built so far and the current state of your application.
- **Baseline Techniques Status:** For each baseline requirement (Phong lighting, texture mapping, multiple light types, GLSL shader setup, transformations and normals), state whether it is: *Completed*, *In Progress*, or *Not Started*. If a technique does not apply to your project, state that clearly.
- **Advanced Techniques Status:** List the advanced techniques chosen in your proposal. For each, state whether it is: *Completed*, *In Progress*, or *Not Started*. Briefly describe what was implemented and any challenges encountered.
- **Screenshots / Renders:** Include 2–4 screenshots or renders of your current build. Each image must have a short caption explaining what is shown and which technique it demonstrates.
- **Challenges Encountered:** 3–5 sentences. Describe the main technical issues you have faced (e.g., shadow acne, TBN basis errors, framebuffer issues) and how you have resolved or plan to resolve them.
- **Remaining Work:** A bullet list of features still to be implemented. Indicate the order in which you plan to complete them.
- **Scope Adjustments (if any):** If you have added, removed, or replaced any techniques compared to your proposal, list them here with a short justification. Confirm that your advanced techniques still satisfy the combined effort score $\geq 6/10$ and that at least one technique has effort $\geq 3/5$.
- **External Assets Update:** List any new models, textures, or HDRIs you have added since the proposal (with sources such as Polyhaven, BlendSwap, 3D Warehouse). Give credit.

Evaluation Criteria

Your progress report will be evaluated based on:

- Evidence of meaningful implementation work since the proposal.
- Clarity of progress description and honesty about remaining work.
- Quality of screenshots demonstrating working techniques.
- Feasibility of the updated timeline.

Submission Format

Save your file as:

`YourLastName_ERP_ProgressReport.pdf`
